CLIENTS' PRAISE:

"I worked with Michael over the course of several lessons and found him to be remarkably knowledgeable and patient. In fact, I was so convinced of his abilities, I asked him to come to our office as a trainer of the staff as we transitioned from Micro Station to AutoCAD. He has received rave reviews from some very computer literate individuals in our office. Recently, he has written a complete set of AutoCAD standards for our office.

"I could not recommend an instructor more highly. Michael is a wonderful and dedicated person. And his knowledge of architecture, as an architect, enables him to anticipate our every need." -- **William Pedersen, FAIA, Principal, Kohn Pedersen Fox Associates PC**

"Our transition from Microstation (which the firm has used for over ten years) to AutoCAD simply would not have been possible without Michael Horta. His experience with AutoDesk products, along with his many years of experience in the architectural profession, made the transition more manageable through his excellent techniques and suggestions of implementation.

"Mr. Horta is the most knowledgeable person I know on the proper use of AutoCAD, as well as 3D Studio in an architectural office. He developed our new standards manual and has taught a number of our staff. The feedback I have received from them was of the highest regard. I recommend Mr. Horta at the highest level possible." -- **Thomas Hernandez, Computer Manager, Kohn Pedersen Fox Associates PC**

"Thanks to Michael's step-by-step and easy-to-understand instructions, not to mention his great humor, I've found so much fun working with computers. What's more, I'm having great time at work!" -- **Jae Shin, SUK Design Group**

"Michael Horta was my first AutoCAD instructor 10 years ago, and no one has taught me better. His classes are structured around the basic skills necessary to be productive and are always focused through the lens of experience. There is, to my knowledge, nothing in the computer aided design branch of this business Michael has not attempted and mastered.

"I still call him for advice on the latest updates in the software and hardware that I depend on to produce documents. The information I get is always accurate, helpful and cheerfully given. I would send anyone interested in learning this skill properly to Michael Horta." -- **L.S. Brodsky – RA, NCARB**

"Nine years ago, Mr. Horta trained our entire office in AutoCAD, at a time when we were loaded with work and had deadlines both in the US and Europe. The transition to computerized drafting, while done with late night training, was fast, easy and proved essential in meeting our commitments. My colleagues and I were enthusiastic about Michael, so we kept in touch all these years.

"Mr. Horta is an architect, and I believe the key to his success in training architects for AutoCAD is Michael's profound understanding of the profession and it's transformation by technology. I think Mr. Horta is a great instructor and a formidable asset for any organization that employs his talent and skills." -- **Vladimir Arsene, President, Westfourth Architecture**

"It was truly eye-opening to see the perfect logic of how the whole suite of applications fits so perfectly. I noticed that you are indeed a natural at teaching as you zeroed-in on the aspects of the ADT/VIZ combination, which were tailored to the rendering/painting model. Also: I just dug hanging out and talking about fishing and survival techniques." -- **Keith Gunderson**
